**Betreff:** Melamine PT 2009/ Preliminary z-scores

Dear Alexander Borek,

We are currently evaluating the results of this PT and preparing the report. Until the full report will be issued a few more weeks will pass.

Realizing that many of the participants are eagerly awaiting their z-scores to assess their performance we send you preliminary results with this email. Please keep in mind that the final z-score might change slightly in the report.

You will find two z-score for each analysed material, one for the melamine concentration as reported by you, the second one for the melamine concentration corrected by the recovery value as reported by you. This assumes that your reported results were not corrected for recovery. If the opposite is the case please let us know immediately.

Your laboratory ID is 4. Please use this ID for all future correspondences!

For those laboratories which have submitted more than one report one email for each report will be send.

<b>Material</b>	<b>Value [mg/kg]</b>	<b>Recovery [%]</b>	<b>z-score</b>
Milk powder (as reported)	10.5		+0.4
Milk powder (corrected for recovery)		122	-1.3
Baking mix (as reported)	3.2		0.0
Baking mix (corrected for recovery)		115	-1.0

With kind regards

Andreas Breidbach
